TIMBER FRAME KITS

Since 1984, we’ve been dedicated to building post and beam structures that are unmatched in caliber. As a third generation family business, we know that it’s not only a quality building that matters, but what quality it can provide: a place to enjoy all that life has to offer with those who matter most.

Our unyielding commitment to quality has driven us from coast to coast, manufacturing out of our 50,000–square–foot timber framing facility with three state–of–the–art CNC machines, and a team of designers, engineers, project managers, and craftsmen to bring each idea to life. Our team will assist you every step of the way as you experience the exhilarating process of raising your own timber frame structure. We are excited to work with you on your next project.

BUILD YOUR DREAM

Get hands-on experience crafting your own timber frame structure with our pre-engineered timber frame packages. Our kits are precision crafted in Ellington, CT, and shipped nationwide. Every timber is numbered, and detailed plans are included, making the process efficient and enjoyable. We're proud to have one of the most advanced timber frame manufacturing & design facilities in the country, combining modern CNC technology with passionate timber frame craftsmen, ensuring authentic joinery and stronger, solid connections.

Raise the frame by following our plans and detailed instructions with your local, trusted crew, or use a recommended crew from our nationwide network of contractors. We could even send one of our site supervisors to assist you and your crew with the raising.

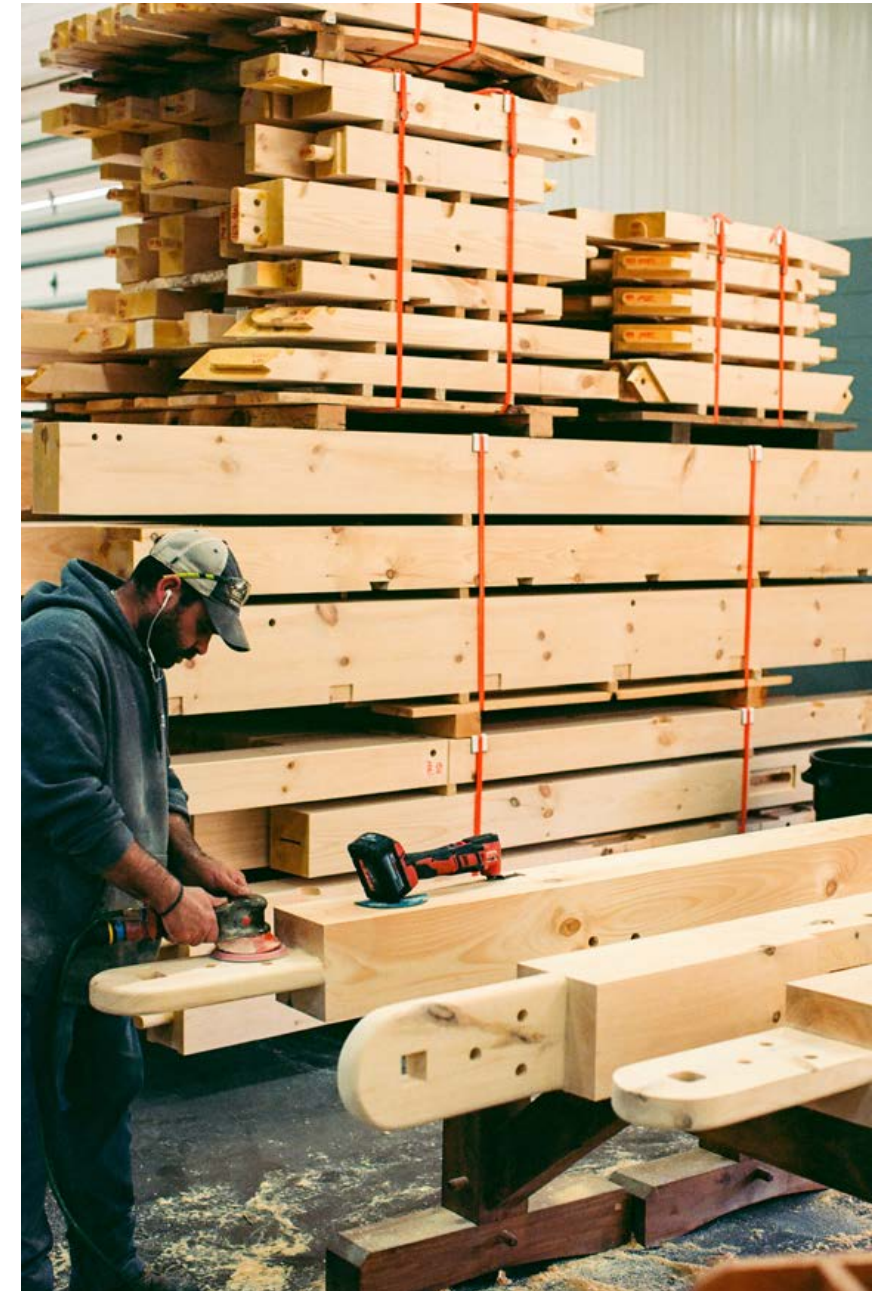

In addition to the pre-cut timber frame, your kit will include fasteners, doors, windows, siding, and decking for the loft and roof. We also include a handmade toolbox with some of the specialty tools you'll need during the raising, like a mallet, lifting straps, a peg sharpener, and more. You will locally source roofing materials. Our packages are easy to assemble, with pre-cut joinery and thorough plans from our designers. We also offer video assembly guides for specific models to further assist you and your team.

WHAT WE DO

Our timber frame packages are versatile, and combine old time craftsmanship with modern technology. When you decide it's time for a timber frame, we'll listen to your needs and help guide you to the right structure. From there, our experienced design team will create the stamped engineered plans for your building and foundation, taking snow loading and other building requirements into consideration and mapping how each timber will be cut to ensure a perfect fit. Your design will then head to our state-of-the-art CNC machines, which will cut each piece with precision. Then, each timber will be hand-sanded for a smooth finish. Finally, your kit will be packaged up and shipped out to your site. You'll have a dedicated Project Manager throughout the entire process, ready to help answer your questions and keep you updated on your project every step of the way.

RAISING SERVICES

We can send our supervisor to work with your trusted crew for the frame raising,

or we can connect you with our network of preferred contractors. No matter how you raise your frame, your dedicated Project Manager will be available to answer questions and assist you and your crew through the project from start to finish.

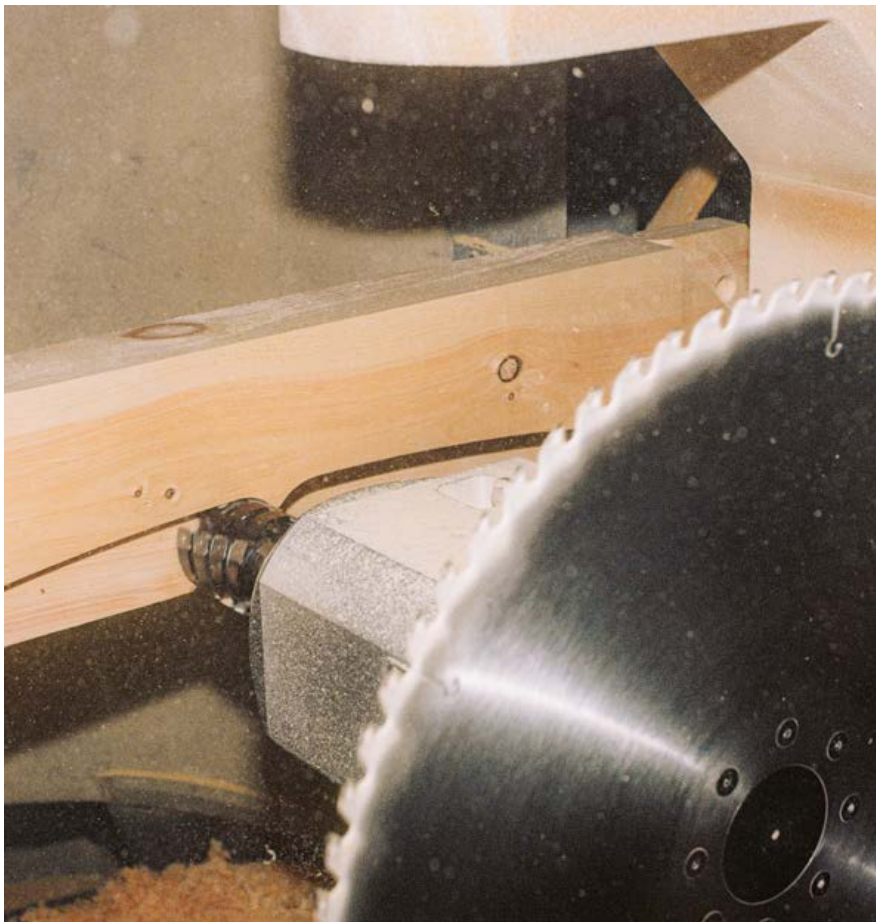

Your raising process will be a unique and memorable experience. Detailed plans, instructional videos, and Project Managers ensure you'll get the job done right.

OUR TIMBER FRAME FACILITY

We're proud to have one of the most advanced timber frame manufacturing & design facilities in the country, combining the craftsmanship of yesterday with the technology of today. We have the perfect blend of CNC technology and passionate timber frame craftsmen. Our 50,000-square-foot facility has three CNC machines, working around the clock cutting the timbers for barns, cabins, pavilions, barn homes, ADUs, and custom projects with incredible precision. Our dedicated craftsmen label and hand-finish each timber, pack them up, and get them ready for transport. Timber framing is the most sustainable building method, and we're a proud member of the Timber Framers Guild.

QUINCY CAR BARN

POST & BEAM SINGLE STORY BARN

Designed with showcasing in mind, the Quincy Car Barn has three glass overhead doors leading into the single story barn's interior. Marvel at the heavy timber king post style roof trusses inside, which command your attention and enhance the barn's interior. There's space for a workshop, as well. And, an open lean-to shelters the side entrance from the elements.

TIMBER SPECIES

We source only the finest quality timbers from responsibly managed forests. Timber framing is the most sustainable building method, and we strive to make the most of any timber that passes through our shop. Sawdust and excess wood scrap is compressed and repurposed into biofuel briquettes to further our commitment to sustainability.

EASTERN WHITE PINE \$
Local Species Harvested in New England, Clean White Appearance, Low Checking, Low Shrinkage, Good Strength Characteristics.

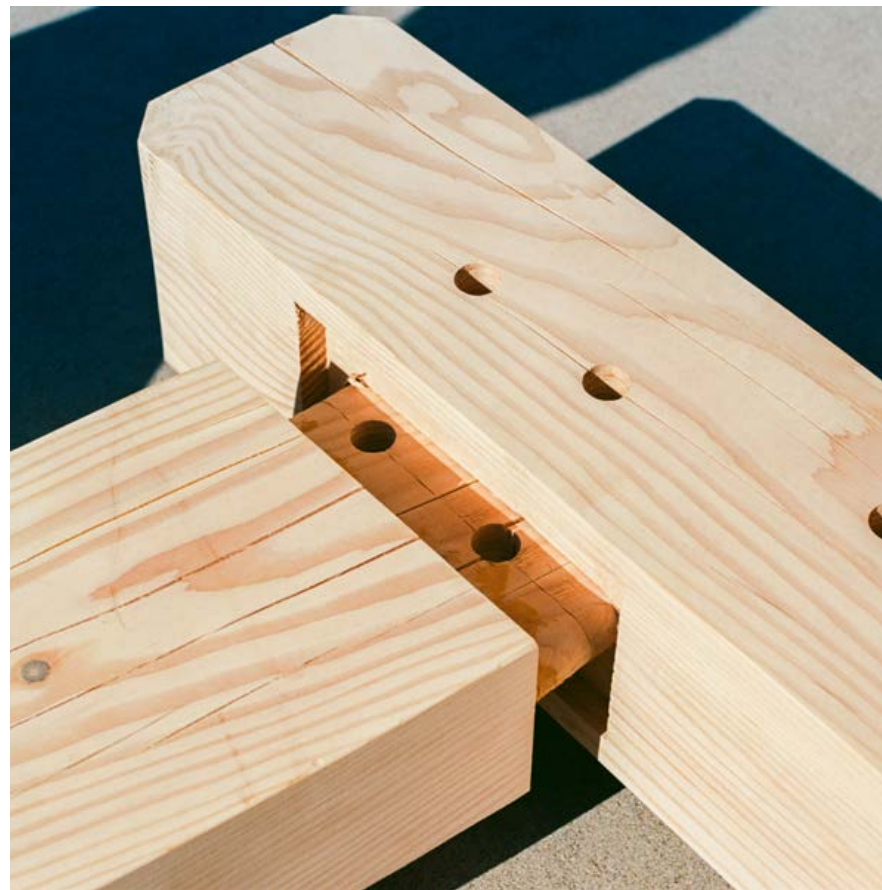

DOUGLAS FIR \$\$
Harvested in West Coast US, Reddish Appearance, Low Checking, Moderate Shrinkage, Superior Strength Characteristics, Less Knots.

OAK \$\$\$
Local Species Harvested in New England, High Checking, High Shrinkage, Superior Strength Characteristics.

AUTHENTIC JOINERY

Timber framing is the art of joining timbers together using only wood to wood connections. We pride ourselves on using authentic timber frame joinery in our builds, and not just metal plates. The precise, strong, and solid mortise & tenon joinery used in our timber frame kit packages is the result of crafting every timber with our state-of-the-art CNC machines.

LEARN MORE ABOUT JOINERY

INSULATION PACKAGES

You're going to like your building so much that you'll want to use it year-round. We have options for every purpose and climate, from light barn insulation to full code-compliant insulation. No matter which insulation package you choose, you won't sacrifice the depth of the timbers—our panels are installed on the exterior of the timber frame.

Cascade ADU Interior

SERVICE CAVITY

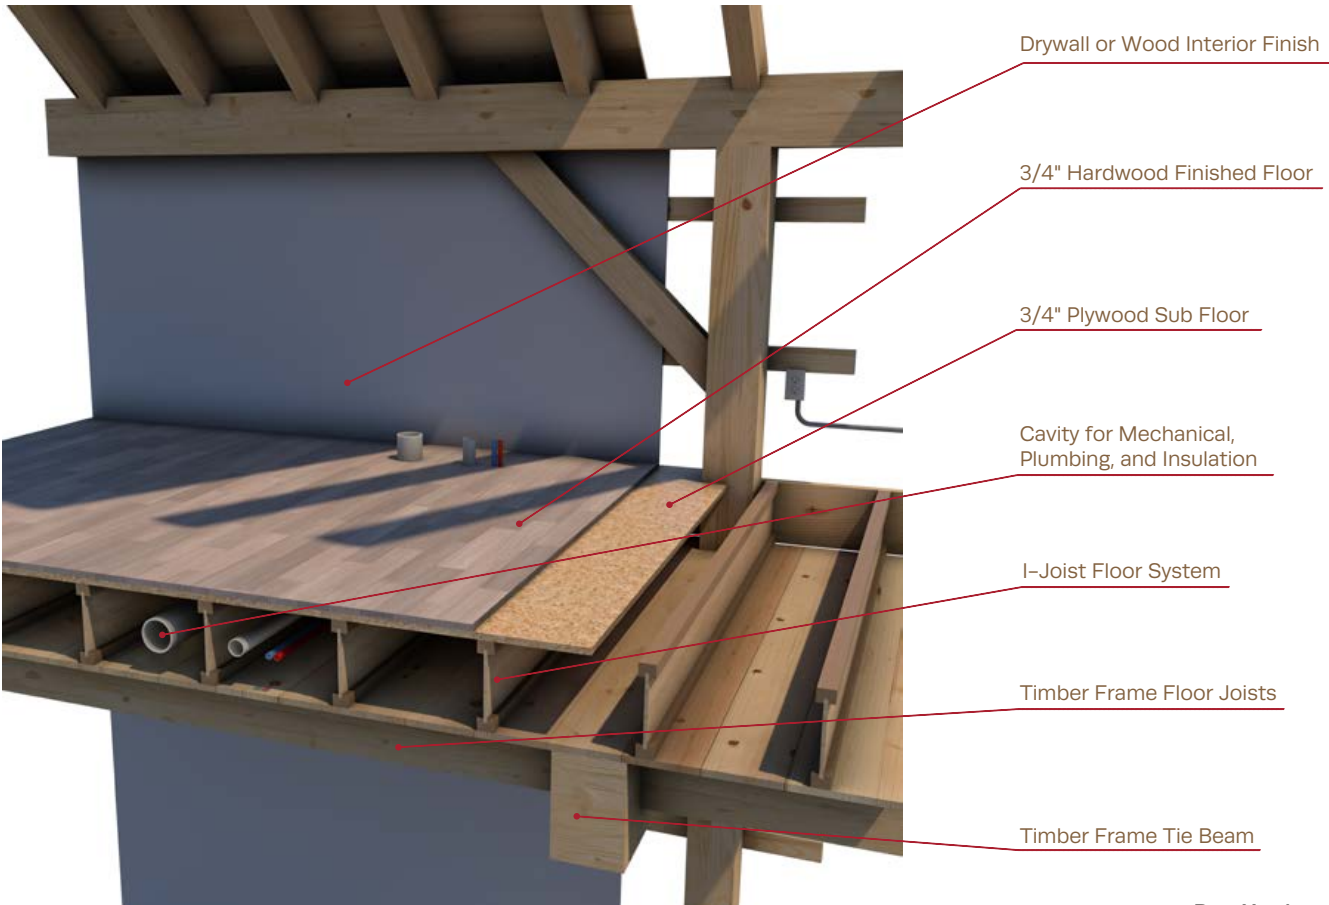

To better prepare your building for electrical, plumbing, and other utilities, we are able to design your barn, cabin, or barn home with a service cavity detail. On the walls, a spacer is added between each post and the SIPs to accommodate electrical systems. On the second floor, I-Joists are added above the timber frame floor system to create a cavity for plumbing and other utilities. By utilizing our service cavity detail, finish contractors will be able to install utilities the same as usual. The full depth of the timber frame structure remains exposed on the interior.
